IEC 60950-1
Information technology equipment – Safety – Part 1: General requirements

Report Number. .....:	1510060STO-001
Date of issue .....:	29 October 2015
Total number of pages	84 pages
Applicant's name .....:	TDK-Lambda Corporation
Address .....:	2704-1 Settaya-machi, Nagaoka-shi, Niigata, 940-1195 JAPAN
Test specification:	
Standard .....:	IEC 60950-1:2005 (Second Edition) + Am 1:2009 + Am 2:2013
Test procedure .....:	CB Scheme
Non-standard test method .....:	N/A
Test Report Form No. .....:	IEC60950_1F
Test Report Form(s) Originator ....:	SGS Fimko Ltd
Master TRF .....:	Dated 2014-02

If this Test Report Form is used by non-IECEE members, the IECEE/IEC logo and the reference to the CB Scheme procedure shall be removed.

This report is not valid as a CB Test Report unless signed by an approved CB Testing Laboratory and appended to a CB Test Certificate issued by an NCB in accordance with IECEE 02.

TEST REPORT issued by an Accredited Testing Laboratory. Accredited by Swedac, no 1003, ISO/IEC 17025.

General disclaimer:

The test results presented in this report relate only to the object tested. This report shall not be reproduced, except in full, without the written approval of the Issuing CB Testing Laboratory. The authenticity of this Test Report and its contents can be verified by contacting the NCB, responsible for this Test Report.

Summary of testing:	
Tests performed (name of test and test clause): See test report	**Testing location:** See page 2

Summary of compliance with National Differences:

☒ The product fulfils the requirements of EN 60950-1:2006+A11:2009+A1:2010+A12:2011+A2:2013.

Group- and national differences for the CENELEC countries have been considered during the testing.

The above products may include /HKM or/BC or/STI all of which are non-critical changes.

/HKM relates to commercial reasons for models PH50/75S48.

/BC relates to minor changes in the feedback circuit.

/STI relates to thermistor changes, standard model PTH9C23BD471Q-T, STI model PTH9C23BB471Q-T.

/NTL relates to longer PCB mounting pins.

General remarks:
"(See Enclosure #)" refers to additional information appended to the report. "(See appended table)" refers to a table appended to the report. The test results and all data in this report are derived from previously issued Test Report No. 1017527 dated 15 August 2010, 1100731 dated 24 January 2011 and Test Report No. 1218101 dated 20 August 2012, issued by Intertek Semko AB. A new report has been issued due to update of the standard IEC 60950-1, to include Am 2: 2013. No additional test has been conducted. Throughout this report a ☐ comma / ☒ point is used as the decimal separator.

Manufacturer's Declaration per sub-clause 4.2.5 of IECEE 02:	
The application for obtaining a CB Test Certificate includes more than one factory location and a declaration from the Manufacturer stating that the sample(s) submitted for evaluation is (are) representative of the products from each factory has been provided ..... :	☒ Yes ☐ Not applicable
When differences exist; they shall be identified in the "*General product information"* section.

REVISION TABLE

Date	Report ref.	Clause	Modification of the appliance
29 Oct. 2015	1510060STO-001	-	Basic Test Report

General Product Information:

a) These products shall be installed in accordance with the requirements of IEC 60950-1, EN 60950-1 for the end use application. The DC to DC converters were tested with the heatsink mounted below the baseplate of the converters (worst case).

b) The DC to DC converter baseplate shall be properly bonded to earth ground in the end use product as this unit was investigated for Class I construction. Subject to application, this may not be necessary.

c) This product must be installed within a host equipment and only be accessible to authorised competent personnel. These products were assessed for reinforced insulation between input and output and basic insulation between input and earth assuming a 250Vac mains supply. These converters may have a mains derived DC supply attached to the input and provide a SELV output. To maintain the SELV output under fault conditions, the output must be connected to earth in the final application.

d) The operation of these DC to DC converters is subject to the end customer maintaining the baseplate at 85°C or below during operation.

e) The input and output connectors are not acceptable for field wiring connections and are only intended for connection to a PCB inside the end use equipment.

f) The recommended input fuse ratings within the instructions were as follows:-
PH50S/PH75S48-* = F5AH, 250V
PH100S48-* = F7AH, 250V
PH150S48-* = F10AH, 250V
The breaking capacity and voltage rating are subject to the end use application.

g) T1, T101/T102 use triple insulated wire with an insulation class for the Transformers of Class F. The baseplate temperature must not exceed 85 degrees Celsius. This temperature limit governs the working ambient temperature.

Ratings:-

PH50S/PH75S48 series.	100% load, 85°C baseplate.
PH100S48 series.	100% load, 85°C baseplate.
PH150S48 series.	100% load, 85°C baseplate.

These products have been assessed for Class 1, Pollution Degree 2, Material Group IIIB, Overvoltage Category II, and Altitude up to 2000 metres, maximum baseplate temperature 85°C.

Testing Environment:
Ambient temperature: 15°C to 25°C
Relative humidity: 25% to 75%
Air pressure: 86 kPa to 106 kPa
