

TDK-Lambda Global Manufacturing status November 2020

TDK-Lambda operates a global network of our own manufacturing sites combined with selected manufacturing partners. This gives a good balance of risk mitigation, capacity expansion, labour availability, cost optimisation, responsiveness and minimising tariff impacts. Most of our products can be manufactured in more than one location. We have substantial experience of transferring manufacturing between locations as the needs of the business and our customers arise.

Currently our sites are located in:

- China
- Israel
- Japan
- Malaysia
- UK
- USA
- (Thailand - coming on stream H1 2021)
